3. The following is an examiner's statement of reasons for allowance:

Luckenbach (US 4,803,256) teaches a method of treating a woven polyester textile in order to enhance the printability of the textile by contacting the textile with an active substance such as a **copolymer** of (A) ethylene glycol polyethylene glycol, (B) aromatic dicarboxylic acid and (C) alkali metal salt of a sulfonated aromatic dicarboxylic. Luckenbach neither teaches nor even fairly suggests the use of aromatic dicarboxylic acid as the active substance, instead it teaches the use of a copolymer containing an aromatic dicarboxylic acid. Furthermore, Luckenbach fails to teach or suggest the solubility value of the active substance.

Hamada et al. (US 6,177,181) teaches a recording sheet having a substrate and a porous membrane containing a hydrophilic polymer onto the substrate, wherein the porous membrane has a microphase separation structure. Hamada neither teaches nor even fairly suggests the use of organic acid in the porous membrane. Hamada fails to teach or suggest the claimed adhesion strength between the substrate and the porous membrane.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
